Location: Navi Mumbai, Maharashtra, India **LinkedIn:** linkedin.com/in/prathamvishwakarma
Portfolio: www.prathamvishwakarma.com

Professional Summary

Software Development Engineer with 2.5+ years of experience building infrastructure automation solutions, supporting containerized platforms, and improving cloud operations in enterprise hybrid cloud environments. Hands-on experience with Docker, Kubernetes, Azure DevOps, Linux, Python, and CI/CD workflows, complemented by independent cloud-native projects on AWS and GitOps-based deployments.

Technical Skills

Core Competencies: Infrastructure Automation, Production Support, Incident Response, Root Cause Analysis, Containerization, Cloud Operations, GitOps, Microservices

Operating Systems: Linux, Windows

Containers: Docker, Kubernetes

CI/CD: Azure DevOps, Jenkins, ArgoCD

Cloud: AWS (EC2, VPC, IAM, EKS, RDS, CloudWatch, Security Groups), GCP

Monitoring & Observability: Prometheus, Grafana

Infrastructure as Code: Terraform

Programming & Frameworks: Python, Shell, FastAPI

Infrastructure Automation: SSH, WinRM, SaltStack, Robot Framework, Remote Command Execution

Professional Experience

Software Development Engineer I | Jio Platforms Limited

Navi Mumbai, MH | Dec 2023 - Present

Hybrid Cloud Management Platform

- Developed infrastructure automation solutions for hybrid cloud environments using Python, supporting Linux and Windows servers through SSH and WinRM based execution.
- Worked extensively with Docker and Kubernetes to validate deployments, inspect container and pod logs, troubleshoot microservices, and support production containerized workloads.
- Integrated infrastructure automation with Azure DevOps pipelines to standardize deployment workflows and operational automation across enterprise environments.
- Built reusable automation modules for remote command execution, database operations, secure file transfers, API integrations, and Kubernetes manifest execution.
- Investigated production automation failures through log analysis and root cause analysis (RCA), improving platform reliability and reducing manual operational effort.
- Collaborated with platform and development teams to automate infrastructure operations and support enterprise hybrid cloud services.

Projects

Notes-Studio: End-to-End DevOps & GitOps Pipeline

Dec 2025 - Mar 2026

Personal Project - www.prathamvishwakarma.com/notes

- Built an end-to-end GitOps deployment pipeline using Jenkins for CI and ArgoCD for CD, automating Docker image builds and Kubernetes deployments.
- Containerized and orchestrated a microservices architecture on Kubernetes, utilizing Persistent Volume Claims (PVCs) and Secrets for stateful configuration management.
- Configured Prometheus and Grafana to monitor Kubernetes cluster health and application metrics.

AWS Cloud Infrastructure & Kubernetes Automation

Jun 2025 - July 2025

Personal cloud-native learning project

- Provisioned foundational AWS infrastructure—VPCs, route tables, security groups, EC2 instances, and Application Load Balancers—using Terraform to host containerized workloads.
- Deployed an Amazon EKS cluster, configured IAM roles for access control, and explored Kubernetes Auto Scaling concepts using Amazon EKS to understand workload scaling and cluster behavior.

Education

B.Tech in Computer Science Engineering

2019 - 2023

Acropolis Institute of Technology & Research, Indore, MP
